PROJECTS

Automated Student Grade Report System

- Architected and built a full-stack grade reporting web app (FastAPI, React, PostgreSQL) that parses excel marksheet of an entire class and auto-generates individual student grade reports with verified test against a marksheet of 20 students.
- Designed a dynamic course-code detection engine to reconcile naming variations across departments and batches, removing the need for manual data cleanup before report generation.

Business Management System

- Built a full-stack business management system (PHP, MySQL, JavaScript) for firms to manage employees, inventory, sales, expenses, and payments from a single dashboard.
- Built an intuitive UI for day-to-day operations and financial reporting.
